

MATHAN M

POWER BI DEVELOPER | DATA ANALYTICS | AZURE-INTEGRATED BI SOLUTIONS

Chennai, India (Open to Bangalore & Hyderabad) • +91 6382974371 • nithishmathan792@gmail.com • [linkedin](#)

PROFESSIONAL SUMMARY

Power BI Developer with 5 years of experience building enterprise BI solutions across pharmaceutical, global business services, and insurance domains, combining strong DAX, Power Query, SQL, and star-schema data modeling with hands-on Azure SQL and Azure Data Factory exposure.

Cut dashboard refresh times from over 10 minutes to under 5 through incremental refresh and query optimization, and implemented dynamic Row-Level Security spanning 5 roles, 9 regions, and 551 users.

Experienced across the full BI lifecycle, from IBM DataStage ETL development through data modeling and Power BI Service deployment, with a track record of proposing solutions — such as a cross-team scorecard matrix — that stakeholders adopt as standard practice.

CORE TECHNICAL SKILLS

BI & Visualization: Power BI Desktop, Power BI Service, Dashboard Development, Data Visualization, KPI Reporting

Data Modeling & DAX: Star Schema Modeling, DAX Measures, CALCULATE, Time Intelligence, USERELATIONSHIP, Row-Level Security (Static & Dynamic)

Power Query & ETL: Power Query (M Language, Query Folding), IBM DataStage, Data Transformation, Data Validation

Databases & Cloud: SQL, SQL Server, Azure SQL Database, DB2, Azure Data Factory (file-to-DB & DB-to-DB pipelines), Microsoft Fabric (Lakehouse, Dataflow Gen2, Warehouse, Deployment Pipelines – self-directed)

Automation & Reporting: Power Automate, Microsoft Excel, SharePoint

Delivery & Support: Production Support, Performance Optimization, UAT, Release Management, Requirement Gathering, Stakeholder Collaboration

PROFESSIONAL EXPERIENCE

Alpharhythm Technologies Pvt. Ltd. | Chennai, India

Mar 2022 – Present

Power BI Developer

- Designed and maintained 6 enterprise Power BI dashboards across Pharma (30+ users) and GBS (20+ users) departments, using DAX, Power Query, SQ and Data models.
- Reduced dashboard refresh time from over 10 minutes to under 5 minutes by implementing incremental refresh on large datasets and optimizing DAX and SQL queries.
- Implemented dynamic Row-Level Security spanning 5 roles, 9 regions, and 551 users, ensuring secure, role-based data access across business functions.
- Proposed and built a Power BI Service scorecard matrix for 11 owners and 3 managers, consolidating employee performance and activity data into a single view, adopted as the client's standard reporting approach.
- Automated daily sales report distribution using Power Automate, eliminating manual email generation and earning recognition from the team lead.
- Connected Power BI to Azure SQL Database and SQL Server, building star-schema data models with time-intelligence relationships (USERELATIONSHIP) powering all 6 enterprise dashboards.
- Partnered with business stakeholders across 6 live reporting solutions serving 10+ users to gather requirements, supported UAT and release management, and delivered production support — including root-cause analysis and performance tuning.

Alpharhythm Technologies Pvt. Ltd. | Chennai, India

Oct 2021 – Mar 2022

ETL Developer & BI Developer

- Developed and maintained 8 parallel jobs and 2 sequence jobs in IBM DataStage, processing approximately 40K records per day (3 crore total) from 3 source tables into DB2.
- Implemented data validation logic across the daily ETL load to identify and remove fraudulent and duplicate records, improving the accuracy of downstream Power BI reporting datasets.
- Built Power BI reports and dashboards sourced directly from DB2 using Power Query and DAX; gathered requirements and provided production support across ETL and reporting solutions.

PROJECT HIGHLIGHTS

- **GBS Scorecard Matrix : Global business service** — Power BI Service dashboards tracking employee hires, exits, and internal movements, with continuous performance and support enhancements.
- **Insurance Operational Reports: Insurance** — IBM DataStage → DB2 ETL pipeline feeding Power BI tabular reports for operational data export in Excel.
- **Microsoft Fabric Practice Project (Self-Directed)** — Built a Lakehouse to ingest raw/unstructured data, cleaned it using Dataflow Gen2, loaded curated tables into a Warehouse, and connected Power BI reports; practiced Dev → UAT → Prod deployment pipelines.

EDUCATION

Bachelor of Engineering, Computer Science and Engineering — Loyola Institute of Technology & Science, Chennai (2017 – 2021) | CGPA: 7.50
